Art Unit: 1639

DETAILED ACTION

Please note: The number of Art Unit 1627 has been changed to 1639. Please direct all

correspondence for this case to Art Unit 1639.

1. The Response filed August 12, 2002 (Paper No. 8) is acknowledged. Claims 4-9

and 17-44 were cancelled and claims 3, 13, 15 and 16 were amended. Therefore, claims

1-3, 10-16 and 45 are pending and under examination.

Withdrawn Rejections

2. The objection to the Abstract is withdrawn in view of applicant's submission of a

new Abstract. The rejections under 35 U.S.C. 112, second paragraph are withdrawn in

view of applicant's claim amendments. Also, the rejections under 35 U.S.C. 102 and 103

are withdrawn in view of applicant's arguments. However, new rejections are made.

Since the new rejections were not entirely necessitated by amendment to the claims, the

case remains in non-final status.

Response to Arguments

3. Applicant's arguments filed August 12, 2002 were found persuasive with respect

to the Still et al reference and the rejections based on this reference are withdrawn. New

rejections follow below.

Art Unit: 1639

Election/Restriction

4. As stated in the Restriction Requirement, claim 1 contains four different inventions. Applicant elected to examine, with traverse, the invention of Group I (claims 1 (*in part*), 2, 3, 10, 11-16 and 45). The traversal was addressed in the last Office Action and the Restriction Requirement was made final. In the previous Office Action (paragraph 7), the examiner stated that claim 1 is examined *to the extent of the elected subject matter only*. Thus the rest of claim 1, pertaining to the non-elected inventions, should be considered as withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to non-elected inventions (the requirement having been traversed in Paper No. 6). Applicant has cancelled claims 4-9 and 17-44 as drawn to non-elected inventions; however, claim 1 has not been amended to remove the non-elected inventions contained within the claim. *An amendment to remove the non-elected subject matter from claim 1 is respectfully requested.* Please also see Objection below.

Claim Objections

5. Claim 1 is objected to because of the following informalities:

As stated above (paragraph 4), claim 1 contains four inventions.

Restriction within claim 1 was set forth in the Restriction Requirement.

Applicant has not amended this claim to remove the non-elected subject matter.

Appropriate correction is required.

Art Unit: 1639

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.
- 7. The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).
- 8. Claims 1 (in part), 2, 10, 11, 12, 14, 15 and 45 are rejected under 35 U.S.C. 102(e) as being anticipated by Hochlowski et al (US 6,168,913) as evidenced by Webster's Dictionary (1994).

Hochlowski et al discloses "coding combinatorial chemical libraries synthesized on a plurality of solid supports by attaching "tags" that comprise fluorine containing compounds in combinations and/or ratios. The tags can be decoded while attached to the solid support by fluorine nuclear magnetic resonance spectroscopy..." (see Abstract). Various fluorine containing tags are

Art Unit: 1639

disclosed by the reference (see column 5, line 15 through column 13, line 21); these read directly on the claimed fluorous {tagging} moieties that differ in fluorous content or structure of instant claims 2, 12 and 15.

The reference discloses using FNMR to identify the tags (see, for example, column 3, lines 2-21 and column 23, lines 1-14), creating for each solid support a code that generates "an unique FNMR spectrum" (column 4, lines 4-10). Note that for the purposes of this rejection that the term "separating" is given the art-recognized definition of "to discriminate or differentiate between", as evidenced by Webster's Dictionary. Thus, Hochlowski et al discloses "separating" the compounds of their coded libraries as the FNMR spectrum clearly differentiates between the tagged library members (see, for example, column 23, lines 1-14, Example 2 and patented claims). The separation discussed above is based on differences between the FNMR chemical shifts of the tagging moieties, see column 5, line 15 through column 13, line 21 {especially column 5, line 29} and Figures. This also reads on the "differences in fluorous nature" in instant claims 1, 11 and 14 and also on the "differences between the first tagging moiety and the second tagging moiety" in instant claim 45. Lastly, as the chemical shifts of the tags are known, the "order" of separation (i.e. placement of peaks in the FNMR spectrum) to identify the compounds that are tagged is deemed to be "predetermined", as recited in instant claims 10 and 45.

Art Unit: 1639

9. Claim 45 is rejected under 35 U.S.C. 102(b) as being anticipated by Brenner (US 5,604,097).

Brenner discloses "a method of tracking, identifying, and/or sorting classes or subpopulations of molecules by the use of oligonucleotide tags" (see Abstract). The "sorting" of Brenner reads on the claimed "separating".

Specifically, see patented claim 1 of the reference. The method disclosed in this claim reads on instant claim 45 where "each polynucleotide in a population of polynucleotides" reads on the first and second compounds of the claims and the "oligonucleotide tags" read on the claimed tagging moieties. Each polynucleotide has a different oligonucleotide tag attached thereto (column 35, lines 3-5) and the polynucleotides from the population are sorted based on the hybridization of the tags (i.e. separated based upon "differences between the first tagging moiety and the second tagging moiety" as in instant claim 45). The hybridization events are controlled by the position of the complements, which are spatially arrayed (column 35, lines 15-19), reading on the "predetermined fraction" of the instant claim.

Claim Rejections - 35 USC § 103

- 10. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject

Art Unit: 1639

matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 11. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made, absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).
- 12. Claims 1 (in part), 2, 3, 10-16 and 45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Curran et al (US 5,859,247; of record) and Hochlowski et al (US 6,168,913), as set forth above.

Curran et al teach separation techniques where "organic/fluorous phase separation techniques are used to effect separations" (see Abstract). These techniques are defined in column 3, line 35 - column 4, line 4 of the reference and read on the separations of instant claims 1, 2, 11, 12, 14 and 15, especially with respect to tagging moieties that differ in fluorous content. Fluorous reversed phase chromatography is specifically described, column 3, line 49 - column 4, line 4 (reading on claims 3, 13 and 16). Curran et al teach that these methods are preferred for separations (and synthesis) of combinatorial libraries (see column 8, line 50 - column 9, line 32). The reference also teaches that a "plurality of

Art Unit: 1639

fluorous moieties" can be used "such that any fluorous reaction components ... are separable from the target organic product" (column 6, lines 29-43) and that "it may be desirable to have more than one tag per molecule, and these tags may be the same or different" (column 16, lines 49-50).

Curran et al lacks the specific teaching of using multiple fluorous tags and separations based on differences between them.

However, the use of multiple tags in the synthesis and analysis of combinatorial libraries was well established in the art at the time of filing. For example, Hochlowski et al teaches "coding combinatorial chemical libraries synthesized on a plurality of solid supports by attaching "tags" that comprise fluorine containing compounds in combinations and/or ratios. The tags can be decoded while attached to the solid support by fluorine nuclear magnetic resonance spectroscopy..." (see Abstract). Various fluorine containing tags are taught by the reference (see column 5, line 15 through column 13, line 21); these read directly on the claimed fluorous {tagging} moieties that differ in fluorous content or structure of instant claims 2, 12 and 15.

Hochlowski et al teaches using FNMR to identify the tags (see, for example, column 3, lines 2-21 and column 23, lines 1-14), creating for each solid support a code that generates "an unique FNMR spectrum" (column 4, lines 4-10). Thus, Hochlowski et al clearly teaches differentiating between the tagged library members using their FNMR spectrum (see, for example, column 23, lines 1-14, Example 2 and patented claims). The differentiation discussed above is

Art Unit: 1639

based on differences between the FNMR chemical shifts of the tagging moieties, see column 5, line 15 through column 13, line 21 {especially column 5, line 29} and Figures. This also reads on the "differences in fluorous nature" in instant claims 1, 11 and 14 and also on the "differences between the first tagging moiety and the second tagging moiety" in instant claim 45. Lastly, as the chemical shifts of the tags are known, the "order" of separation (i.e. placement of peaks in the FNMR spectrum) to identify the compounds that are tagged is deemed to be "predetermined", as recited in instant claims 10 and 45.

Therefore it would have been *prima facie* obvious to one of ordinary skill in the art at the time of the invention to use multiple fluorous tags in the fluorous separations (i.e. reversed phase chromatography) of Curran et al. A person of ordinary skill in the art would have been motivated to do so based on the teachings of Hochlowski et al regarding the use of multiple fluorine containing tags in order to separate and identify each library compound (see column 2, line 65 through column 3, line 21). Also, the methodology of Curran is advantageous for combinatorial synthesis and analysis for a variety of reasons (see column 8, line 28 through column 9, line 11), such as allowing for reactions to be conducted in homogeneous phases. One would have been further motivated and had a high expectation of success because the tags of both Curran et al and Hochlowski et al are fluorine containing compounds.

Art Unit: 1639

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

- 14. A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b). Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).
- 15. Claims 1 (in part), 2, 3, 10, 11-16 and 45 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-9 of US 5,859,247 (of record) in view of Hochlowski et al (US 6,168,913).

An obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but an examined application claim not is

Art Unit: 1639

patentably distinct from the reference claim(s) because the examined claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985).

Although the conflicting claims are not identical, they are not patentably distinct from each other because the recited claims in the patent and in the instant application encompass separations based on differences in fluorous nature. The instant method uses more than one tagging moiety, while the method of US 5,859,247 only recites one tagging moiety. However, the method instantly claimed would be obvious over that in claims 1-9 of US 5,859,247 because to use more than one tagging moiety (to aid in the separation) would be obvious to one of ordinary skill. This is demonstrated by the teachings of Hochlowski et al, which teach the differentiation of library members using a plurality of fluorine containing tags (see Abstract and column 5, line 15 through column 13, line 21).

Therefore it would have been prima facie obvious to one of ordinary skill in the art at the time of the invention to use multiple fluorous tags in the fluorous separations of Curran et al. A person of ordinary skill in the art would have been motivated to do so based on the teachings of Hochlowski et al regarding the use of multiple fluorine containing tags in order to separate and identify each library compound (see column 2, line 65 through column 3, line 21). One would have

Page 12

Serial Number: 09/506,779

Art Unit: 1639

been further motivated and had a high expectation of success because the tags of

both Curran et al and Hochlowski et al are fluorine containing compounds.

Status of Claims/Conclusion

16. No claims are allowed.

17. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Maurie Garcia Baker, Ph.D. whose telephone number is

(703) 308-0065. The examiner can normally be reached on Monday-Thursday from 9:30

to 7:00 and alternate Fridays.

18. If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Andrew J. Wang, can be reached on (703) 306-3217. The fax phone number

for the organization where this application or proceeding is assigned is (703) 308-4242.

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the receptionist whose telephone number is (703) 308-0196.
